Various

Joker 24 Clubman now in the online auction. everyone can bid until 19 January 2026.

Joker 24 Clubman €“ Spacious and Versatile RIB with Powerful Outboard Motor

The Joker 24 Clubman is a rigid inflatable boat (RIB) known for its spacious layout and stable sailing characteristics. This particular model, built in 2001, offers a combination of functional space, robust construction, and a powerful motor configuration. With a length of 7.46 meters and a width of 2.99 meters (2.55 meters with deflated tubes), this boat is suitable for various sailing conditions, including coastal waters and open sea.

Joker 24 Clubman now in the online auction. Everyone can bid until January 19, 2026.

Construction and Design

The Joker 24 Clubman is made of polyester, a material widely used in boat building due to its strength and relatively low weight. The hull features a V-bottom, which enhances sailing characteristics at higher speeds and in rougher waters. This hull shape provides better stability and a more comfortable ride, especially in waves or wind.

The tubes of this RIB have been repainted. Although the finish is not described as sleek, the tubes themselves are functional and in usable condition. In 2025, all tube valves were replaced, contributing to the reliability of the inflatable parts. The boat is equipped with a steering wheel, ensuring direct and controlled handling.

Layout and Onboard Comfort

The Joker 24 Clubman offers a remarkably spacious layout for a boat of this size. The available space on board allows for comfortable sailing with multiple people. There is ample seating and storage space, making the boat suitable for day trips or recreational use on the water.

All cushions are present and in reasonable condition. They contribute to comfort while sailing or relaxing on board. The boat is equipped with various instruments, some of which were renewed in 2025. This enhances user-friendliness and oversight while sailing.

Motorization and Performance

The boat is equipped with a Mercury 200 Optimax outboard motor, a power source known for its performance and efficiency. This motor, with a power of 200 hp, is electrically started and has a total of 699 running hours. According to the specifications, the motor is from the year 2008. The motor is operational and provides sufficient power for both leisurely trips and faster sailing.

Thanks to the combination of the V-bottom and the powerful motor, the Joker 24 Clubman is suitable for various sailing conditions. The boat is described as seaworthy, making it suitable for use on open water and in changing weather conditions.

Registration and Maintenance

The boat is registered with the RDW, meaning it complies with Dutch regulations for pleasure craft. In 2025, the boat was taken out of the water for maintenance. During this maintenance, the tube valves were replaced, and new instruments were installed.

Conclusion

The 2001 Joker 24 Clubman is a spacious and functional RIB with a polyester hull and a powerful Mercury outboard motor. The boat offers plenty of space on board, both for passengers and storage, and is suitable for use at sea and on inland waters. With recent technical updates and an operational motor, this RIB is an interesting option for water sports enthusiasts looking for a versatile boat with a practical layout.
