Neptunus 107 now in the online auction. everyone can bid until 21 September 2026.

neptunus 107 motorboat for relaxing cruises

what type of boat is the neptunus 107?

the neptunus 107 is a spacious polyester motorboat from 1977, designed by c. van gelder and built by neptunus shipyard. with a length of 10.70 metres, a beam of 3.35 metres and a draft of 1.09 metres, she is suitable for relaxing cruises on inland waterways, lakes and rivers. the s-shaped hull gives her a classic appearance and suits the character of this comfortable motorboat.

this neptunus has been used for recreational boating and, with six permanent berths, offers plenty of possibilities for longer weekends or holidays on the water. her generous layout, headroom of approximately 1.85 metres and practical facilities make her an interesting option for watersports enthusiasts looking for a spacious motorboat with sleeping accommodation. the boat weighs approximately 7,000 kilograms.

neptunus 107 now available in the online auction. everyone can place bids until 21 september 2026.

what is the layout like on board?

inside, she has a cosy dining area with original furniture, cushions and curtains. the mattresses provided make the six permanent berths immediately usable, depending on the personal preferences of the new owner. the layout is designed for comfortable living on board, with enough space to eat, relax and spend the night together.

the galley is equipped with a cooking appliance, refrigerator and hot-water system. for additional comfort on cooler days, the neptunus has hot-air heating. the electric toilet on board does not discharge directly into open water. this provides a practical sanitary facility for longer cruises and stays on board.

the interior has a classic appearance that suits the year in which she was built. anyone looking for a motorboat for sale with character, living space and a nautical atmosphere will find an interesting basis for further personal modifications in this neptunus 107.

which engine is installed in the neptunus?

the boat is powered by a daf 575 diesel engine from 1977. this six-cylinder inboard engine produces 100 hp and has electric starting. according to the available information, the engine is operational. on board are a fuel tank gauge, oil pressure gauge, temperature gauge and rev counter, allowing the main engine functions to be monitored while cruising.

in addition to the main engine, she has a jet bow thruster, which can make manoeuvring into a berth or while mooring easier. the combination of a diesel engine, wheel steering and a single rudder system suits her use as a comfortable motorboat for inland waterways and longer cruises.

the engine installation, like the rest of the boat, requires attention from a new owner. the client states that there is overdue maintenance. A technical inspection, carrying out maintenance and checking the fluids, hoses, filters, drivetrain and electrical connections are therefore logical preparations before she is used intensively.

which facilities are present?

the neptunus 107 has practical equipment for recreational use. shore power, a battery charger and an inverter are present on board. for anchoring, she has one anchor with chain and an electric windlass. an electric bilge pump is also present, and a lifebuoy is included.

the boat has no tender and no trailer is included. the steering is positioned in two locations, which can provide additional flexibility in different cruising conditions. the combination of interior space, heating, cooking facilities, sanitary facilities and electrical systems makes her suitable for watersports enthusiasts who enjoy spending several days on board.

what work can be expected?

the boat is in reasonable condition and requires attention after a period of being laid up. the overdue maintenance in particular is an important consideration for interested parties. according to the client, the polyester hull and superstructure are due for painting. this also provides an opportunity to refresh her appearance according to personal taste and bring out her classic lines once again.

the last time she was taken out of the water for maintenance was in 2021. the antifouling was applied in that same year.

this boat is

therefore particularly interesting for someone looking for a motorboat project with a solid foundation and willing to invest time and attention in her. the work can be carried out step by step, after which she can once again be tailored to relaxing cruises and stays on the water.

who is this boat suitable for?

the neptunus 107 will appeal to a buyer who appreciates the charm of a classic polyester motorboat and enjoys deciding on the further finishing themselves. her dimensions offer a pleasant balance between interior space and manoeuvrability. with six berths, a galley, toilet, heating and hot water, she is equipped for recreational use with family or friends.

she may be of interest as a motorboat for inland waterways, a holiday boat for rivers and lakes, or a comfortable liveaboard for peaceful weekends. the daf diesel engine, jet bow thruster and electric windlass provide useful equipment for this purpose. it is important, however, that interested parties take the stated maintenance work into account and inspect the boat carefully beforehand.

why bid through boatauction?

this neptunus 107 is being offered through boatauction to watersports enthusiasts looking for a spacious motorboat with classic lines and clear potential for development. the combination of her polyester hull, generous accommodation, six berths and 100 hp diesel engine makes her a versatile foundation.

whoever gives her renewed attention can further adapt the neptunus to their own cruising plans and comfort requirements. her distinctive design, practical facilities and spacious interior make her worthwhile for a buyer looking for a project with potential. review the available auction information carefully, arrange a viewing if possible and form your own opinion of her technical and cosmetic condition before placing a bid.
